The oldest startup in the valley

What we do

- Server Integrator specializing in Open Source operating systems

- Especially FreeBSD

- But that isn't as interesting to today's crowd

FreeNAS

- We like to call it the world's most popular Open Source Software Defined Storage Operating System

- iXsystems took over development of FreeNAS in 2010. The FreeNAS we took over then supported UFS and had experimental support for ZFS

- We have since gone all in on ZFS

ZFS in FreeNAS

- We track OpenZFS, which means the ZFS in FreeNAS is more advanced than FreeBSD or Linux

- There's a commercial product based on FreeNAS called TrueNAS that drives our need for development of enterprise features in ZFS
